Dr. Larry Burt completes advanced training

Training on back-of-mouth restorations included actual patient experience

SOUTH WEYMOUTH—March 2, 2010—Dr. Larry Burt of South Shore Dentistry, which specializes in cosmetic and sedation dentistry, recently completed an advanced education course, “Posterior Partial Coverage Bonded Restorations.” The training taught techniques for restoring teeth toward the back of the mouth with partial-coverage, porcelain restorations. The course also included completing the procedure on an actual patient.

Using sedation dentistry, Burt condenses complex treatments that patients usually undergo during a longer series of office visits into a single appointment. While under sedation patients are conscious, but have little to no memory of the treatment they receive.
